The Southeast  
Conservation  
Adaptation Strategy

SECAS

The Southeast Conservation Blueprint 2022

[THIS PAGE INTENTIONALLY LEFT BLANK]

# About the Southeast Blueprint

The Southeast Conservation Blueprint is the primary product of the [Southeast Conservation Adaptation Strategy](#) (SECAS). It is a living, spatial plan to achieve the SECAS vision of a connected network of lands and waters across the Southeast and Caribbean. The Blueprint is regularly updated to incorporate new data, partner input, and information about on-the-ground conditions.

Across 15 states of the Southeast, the Blueprint identifies priority areas based on a suite of natural and cultural resource indicators representing terrestrial, freshwater, and marine ecosystems. A connectivity analysis identifies corridors that link coastal and inland areas and span climate gradients. This portion of the Southeast Blueprint is referred to as the "Base Blueprint".

To provide more complete coverage of the SECAS geography, the Blueprint incorporates two additional input plans: the Florida Marine Blueprint for marine areas in Florida and the Caribbean Landscape Conservation Design for inland areas in Puerto Rico.

For more information:

- Visit the [Blueprint webpage](#)
- Review the [Blueprint 2022 Development Process](#)
- View and download the Blueprint data and make maps on the [Blueprint page of the SECAS Atlas](#)

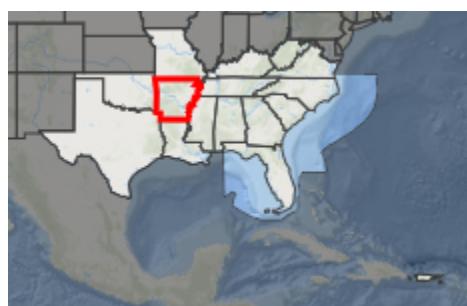

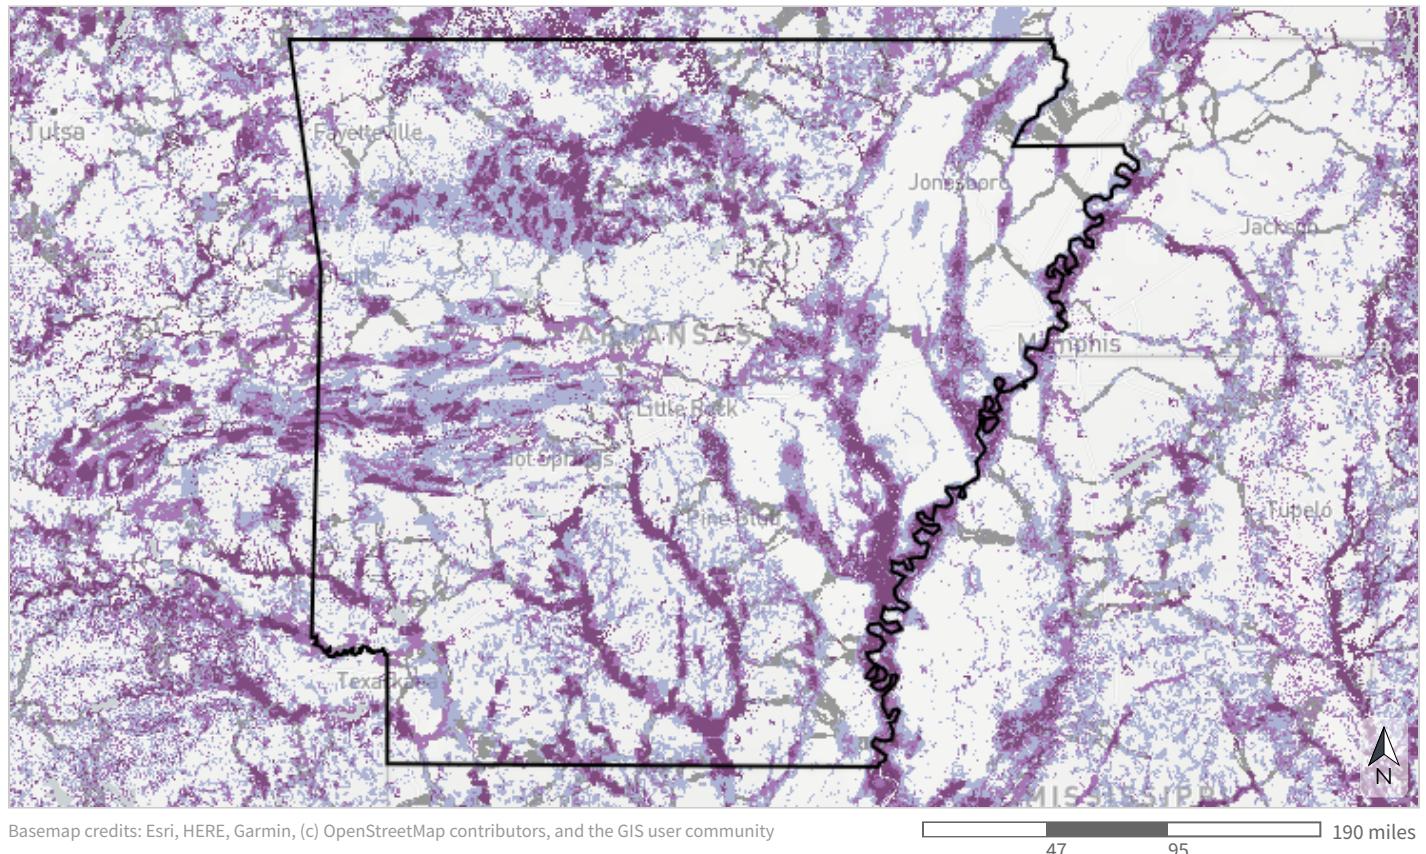

## We're here to help!

- Do you have a question about the Blueprint?
- Would you like help using the Blueprint to support a proposal or inform a decision?
- Do you have a suggestion on how to improve the Blueprint? The Blueprint and its inputs are regularly revised based on input from people like you.
- Do you have feedback on how to improve the Simple Viewer interface?

If you need help or have questions, [contact Southeast Blueprint staff](#) by reaching out to a member of the user support team.

We're here to support you. We really mean it. It's what we do!

# Southeast Blueprint Priorities

## Priorities for a connected network of lands and waters

- Highest priority
- High priority
- Medium priority
- Priority connections

# Priority Categories

## For a connected network of lands and waters

In total, Blueprint priorities and priority connections cover roughly 50% of the Southeast Blueprint geography.

### Highest priority

Areas where conservation action would make the biggest impact, based on a suite of natural and cultural resource indicators. This class covers roughly 10% of the Southeast Blueprint geography.

### High priority

Areas where conservation action would make a big impact, based on a suite of natural and cultural resource indicators. This class covers roughly 15% of the Southeast Blueprint geography.

### Medium priority

Areas where conservation action would make an above-average impact, based on a suite of natural and cultural resource indicators. This class covers roughly 20% of the Southeast Blueprint geography.

### Priority connections

Connections between priority areas that cover the shortest distance possible while routing through as much Blueprint priority as possible. This class covers roughly 5% of the Southeast Blueprint geography.

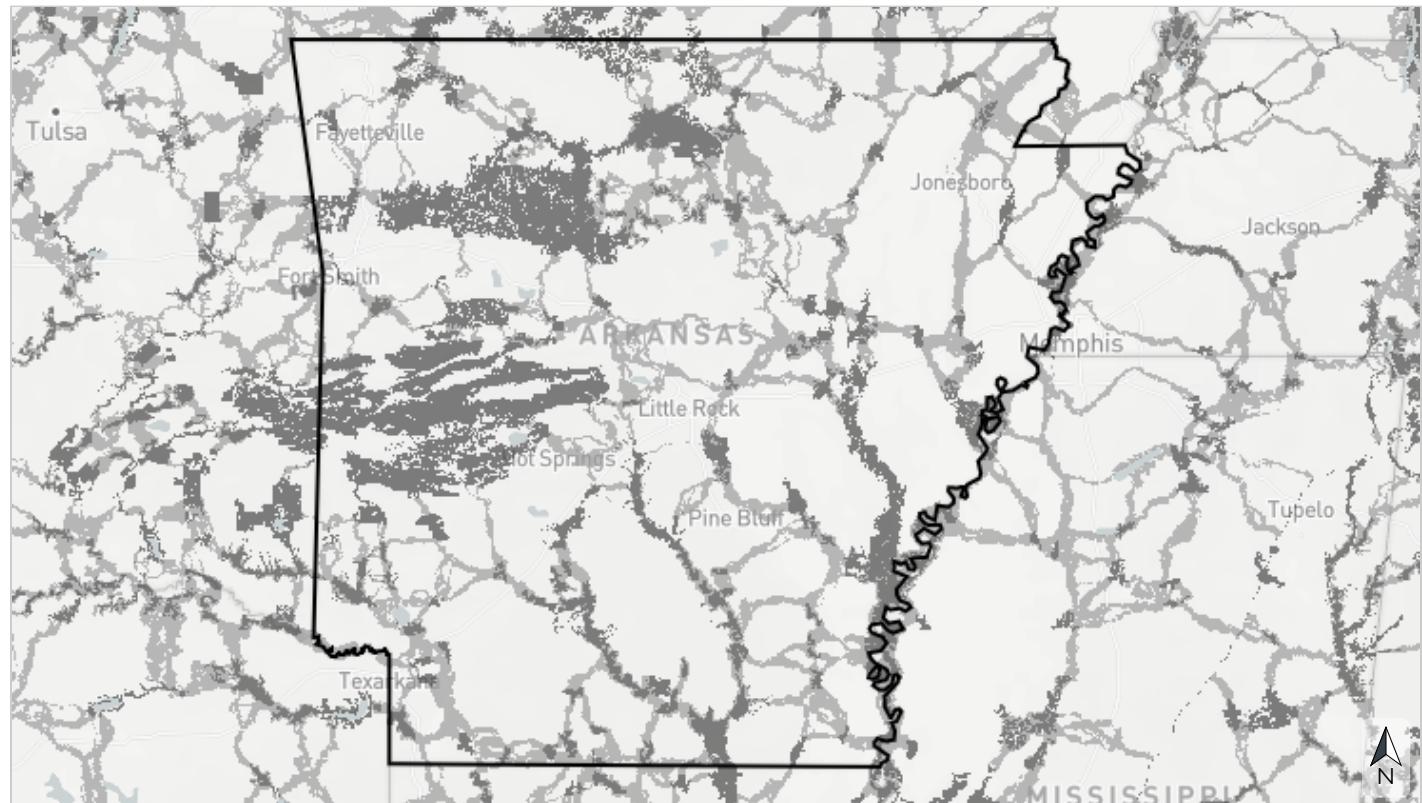

Table 1: Extent of each Blueprint priority category.

Priority Category	Acres	Percent of Area
Highest priority	3,234,206	9.5%
High priority	4,512,941	13.3%
Medium priority	7,311,861	21.5%
Priority connections	1,436,407	4.2%
Lower priority	17,551,346	51.6%
<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

## Hubs and Corridors

The Blueprint uses a least-cost path connectivity analysis to identify corridors that link hubs across the shortest distance possible, while also routing through as much Blueprint priority as possible.

Inland hubs are large patches (~5,000+ acres) of highest priority Blueprint areas and/or protected lands, connected by inland corridors. Marine and estuarine hubs are large estuaries and large patches (~5,000+ acres) of highest priority Blueprint areas. Marine and estuarine corridors connect those hubs within broad marine mammal movement areas.

## Equitable access to potential parks

This cultural resource indicator prioritizes places to create new parks that would fill gaps in equitable access to open space within socially vulnerable communities. It identifies areas where residents currently lack access to parks within a 10-minute walk (accounting for walkable road networks and access barriers like highways and fences), then prioritizes based on park need using demographic and environmental metrics. Parks help improve public health, foster a conservation ethic by providing opportunities for people to connect with nature, and support critical ecosystem services. This indicator originates from the Trust for Public Land's ParkServe park priority areas.

- Very high priority for a new park that would create nearby equitable access
- High priority for a new park that would create nearby equitable access
- Moderate priority for a new park that would create nearby equitable access

*Table 5: Indicator values for equitable access to potential parks in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Very high priority for a new park that would create nearby equitable access	84,264	0.2%
	High priority for a new park that would create nearby equitable access	113,756	0.3%
↓ Low	Moderate priority for a new park that would create nearby equitable access	115,982	0.3%
	<i>Area not evaluated for this indicator</i>	33,732,758	99.1%
	<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

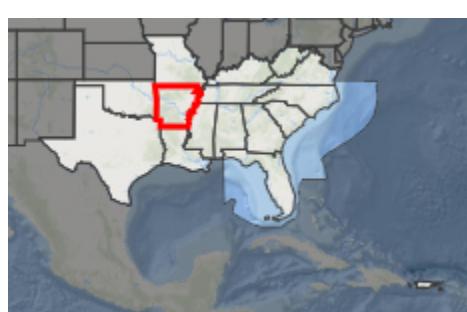

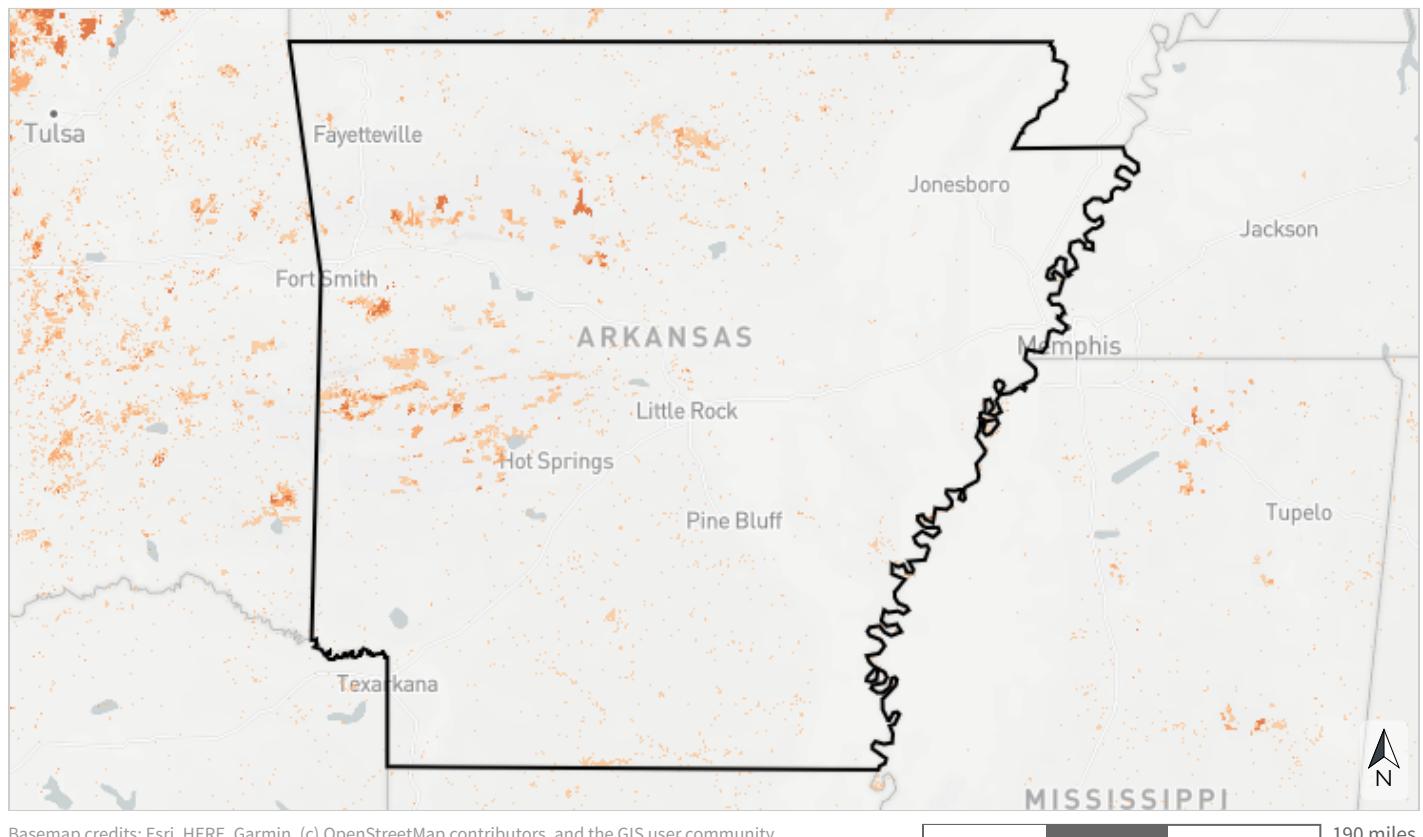

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Fire frequency

This indicator uses remote sensing to estimate the number of times an area has been burned from 2013 to 2021. Many Southeastern ecosystems rely on regular, low-intensity fires to maintain habitat, encourage native plant growth, and reduce wildfire risk. This indicator combines burned area layers from both U.S. Geological Survey Landsat data and the inter-agency Monitoring Trends in Burn Severity program. Landsat-based fire predictions within the range of longleaf pine are also available through Southeast FireMap.

- Burned 3+ times from 2013-2021
- Burned 2 times from 2013-2021
- Burned 1 time from 2013-2021
- Not burned from 2013-2021 or row crop

*Table 6: Indicator values for fire frequency in this area. Good condition thresholds reflect the range of indicator values that occur in healthy, functioning ecosystems.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>	
↑ High	Burned 3+ times from 2013-2021	54,570	0.2%	↑ In good condition
	Burned 2 times from 2013-2021	156,068	0.5%	
	Burned 1 time from 2013-2021	850,511	2.5%	
↓ Low	Not burned from 2013-2021 or row crop	32,985,610	96.9%	↓ Not in good condition
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>	

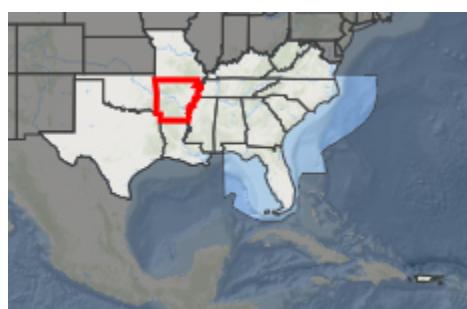

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Greenways & trails

This cultural resource indicator measures both the natural condition and connected length of greenways and trails to characterize the quality of the recreational experience. Natural condition is based on the amount of impervious surface surrounding the path. Connected length captures how far a person can go without leaving a dedicated path, based on common distances for walking, running, and biking. This indicator originates from OpenStreetMap.

- Mostly natural and connected for  $\geq 40$  km
- Mostly natural and connected for 5 to  $< 40$  km or partly natural and connected for  $\geq 40$  km
- Mostly natural and connected for 1.9 to  $< 5$  km, partly natural and connected for 5 to  $< 40$  km, or developed and  $\geq 40$  km
- Mostly natural and connected for  $< 1.9$  km, partly natural and connected for 1.9 to  $< 5$  km, or developed and connected for 5 to  $< 40$  km
- Partly natural and connected for  $< 1.9$  km or developed and connected for 1.9 to  $< 5$  km
- Developed and connected for  $< 1.9$  km
- Sidewalk or other path

Table 7: Indicator values for greenways & trails in this area. Good condition thresholds reflect the range of indicator values that occur in healthy, functioning ecosystems.

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Mostly natural and connected for $\geq 40$ km	5,628	<0.1%
	Mostly natural and connected for 5 to $<40$ km or partly natural and connected for $\geq 40$ km	5,418	<0.1%
	Mostly natural and connected for 1.9 to $<5$ km, partly natural and connected for 5 to $<40$ km, or developed and $\geq 40$ km	2,587	<0.1%
	Mostly natural and connected for $<1.9$ km, partly natural and connected for 1.9 to $<5$ km, or developed and connected for 5 to $<40$ km	351	<0.1%
	Partly natural and connected for $<1.9$ km or developed and connected for 1.9 to $<5$ km	492	<0.1%
↓ Low	Developed and connected for $<1.9$ km	165	<0.1%
	Sidewalk or other path	21,975	<0.1%

Terrestrial

## Intact habitat cores

This indicator represents the size of large, unfragmented patches of natural habitat. It identifies minimally disturbed natural areas at least 100 acres in size and greater than 200 meters wide. Large areas of intact natural habitat are important for many wildlife species, including reptiles and amphibians, birds, and large mammals. This indicator originates from Esri's green infrastructure data.

- Large core (>10,000 acres)
- Medium core (>1,000-10,000 acres)
- Small core (>100-1,000 acres)
- Not a core

*Table 8: Indicator values for intact habitat cores in this area. Good condition thresholds reflect the range of indicator values that occur in healthy, functioning ecosystems.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Large core (>10,000 acres)	4,183,612	12.3%
	Medium core (>1,000-10,000 acres)	8,493,546	24.9%
	Small core (>100-1,000 acres)	3,449,932	10.1%
↓ Low	Not a core	17,919,670	52.6%
	<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

↑ In good condition

↓ Not in good condition

Terrestrial

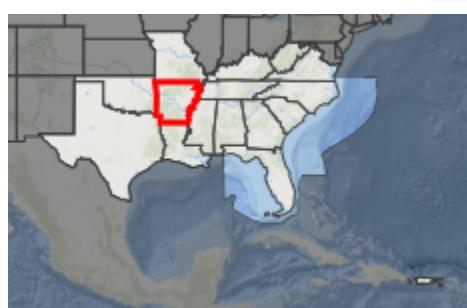

## Interior Southeast grasslands

This indicator represents grasslands in the interior southeastern United States, which support important plants, birds, and pollinators. It includes grasslands with and without trees that are historically maintained by geology (e.g., outcrops, glades, and barrens), fire (e.g., Piedmont prairies), and/or the regular violent flooding on the banks of high-energy rivers known as “riverscour” (e.g., riverscour prairies). Known grasslands receive the highest scores, followed by bumble bee habitat buffers around known sites, areas in potentially compatible management, and restoration opportunities within grassland geology. This indicator combines data from multiple sources, including the Southeastern Grasslands Initiative, the Central Hardwoods Joint Venture, the Rangeland Analysis Platform, and The Nature Conservancy.

Basemap credits: Esri, HERE, Garmin, (c) OpenStreetMap contributors, and the GIS user community

190 miles  
47 95 N

- Known grassland
- Known grassland buffer
- Potentially compatible management within grassland geology (undeveloped powerline right-of-way or perennial forbs and grasses)
- Potentially compatible management outside of grassland geology (undeveloped powerline right-of-way or perennial forbs and grasses)
- Grassland geology
- Grassland less likely

*Table 9: Indicator values for Interior Southeast grasslands in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Known grassland	120	<0.1%
	Known grassland buffer	2,229	<0.1%
	Potentially compatible management within grassland geology (undeveloped powerline right-of-way or perennial forbs and grasses)	514,688	1.5%
	Potentially compatible management outside of grassland geology (undeveloped powerline right-of-way or perennial forbs and grasses)	1,086,938	3.2%
↓ Low	Grassland geology	658,928	1.9%
	Grassland less likely	2,673,446	7.9%
	<i>Area not evaluated for this indicator</i>	29,110,412	85.5%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

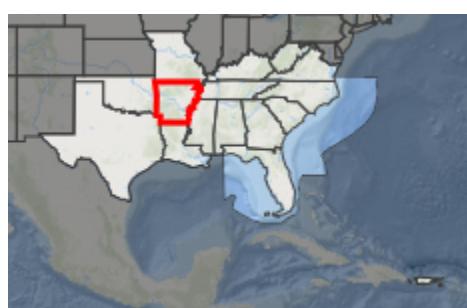

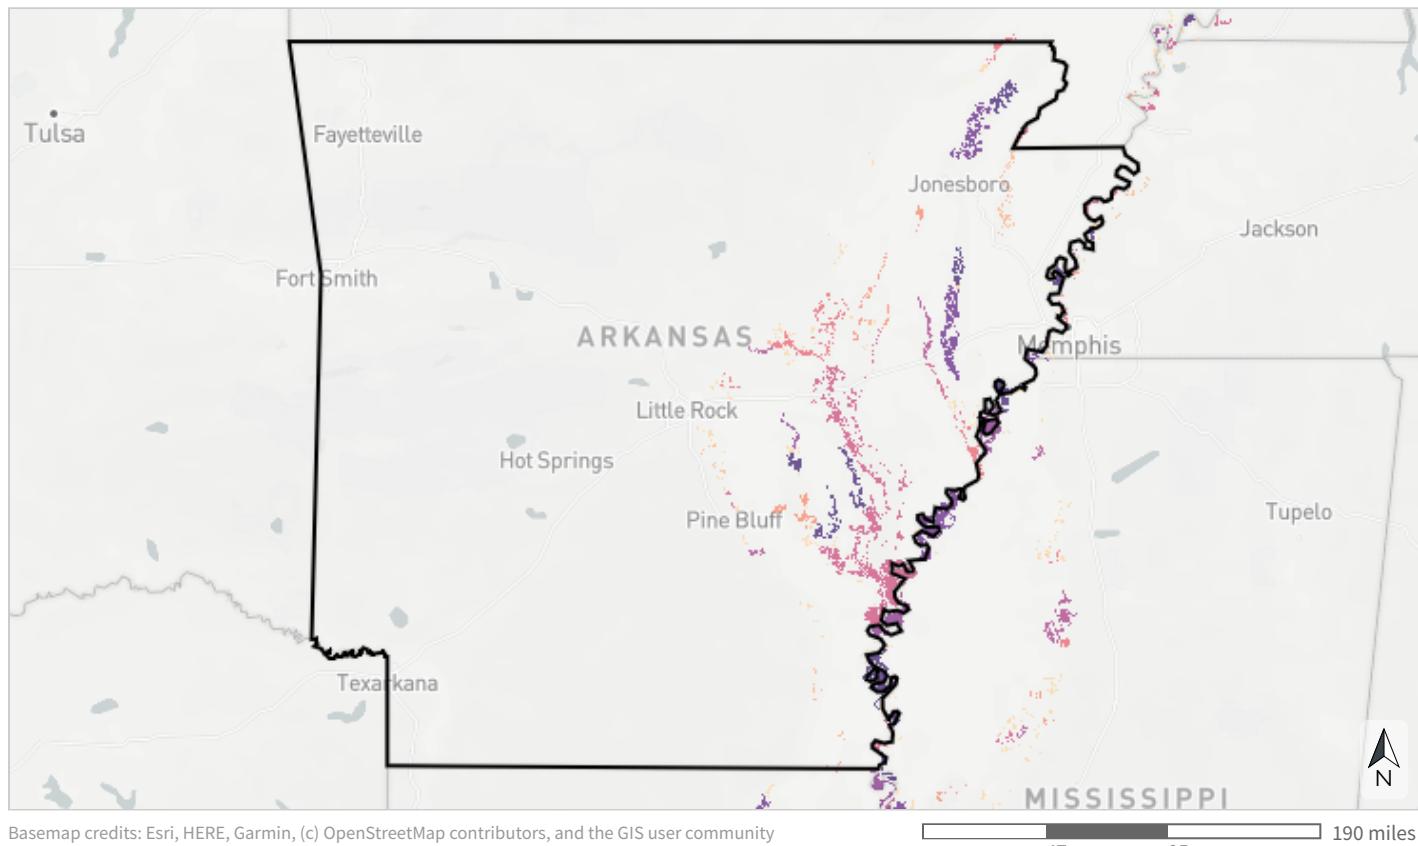

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Mississippi Alluvial Valley forest birds (protection)

This indicator prioritizes areas for new land protection within the Mississippi Alluvial Valley (MAV) based on benefits to forest breeding birds that depend on large interior cores of bottomland hardwood habitat (Swainson's warbler, cerulean warbler, swallow-tailed kite). The model considers core size, the amount of existing protected land within the forest patch, proximity to reforestation priority areas, and risk of conversion to agriculture based on flooding frequency. The highest scores represent drier, unprotected forest patches with cores at least 2,000 ha (~5,000 ac) that are adjacent to priority areas from a complementary reforestation model also developed by the Lower Mississippi Valley Joint Venture (LMJV). This indicator originates from the LMJV's MAV forest breeding bird protection priorities.

### Priority of forest breeding bird habitat patch for future protection

- Score >90-100 (highest priority)
- Score >80-90
- Score >70-80
- Score >60-70
- Score >50-60
- Score >40-50
- Score >30-40
- Score >20-30
- Score >10-20
- Score 0-10 (lowest priority)

*Table 10: Indicator values for Mississippi Alluvial Valley forest birds (protection) in this area. A good condition threshold is not yet defined for this indicator.*

<b>Indicator Values: Priority of forest breeding bird habitat patch for future protection</b>		<b>Acres</b>	<b>Percent of Area</b>
↑ High	Score >90-100 (highest priority)	123,983	0.4%
	Score >80-90	107,617	0.3%
	Score >70-80	26,396	<0.1%
	Score >60-70	22,668	<0.1%
	Score >50-60	233,975	0.7%
	Score >40-50	62,130	0.2%
	Score >30-40	36,397	0.1%
	Score >20-30	26,285	<0.1%
	Score >10-20	63,268	0.2%
	Score 0-10 (lowest priority)	7,092	<0.1%
<i>Area not evaluated for this indicator</i>		33,336,950	97.9%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

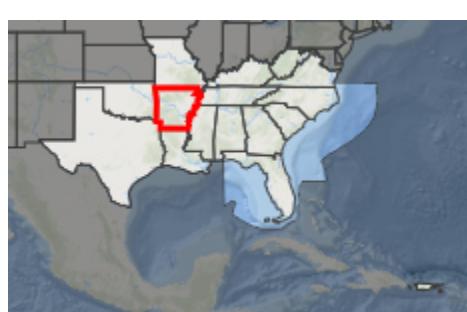

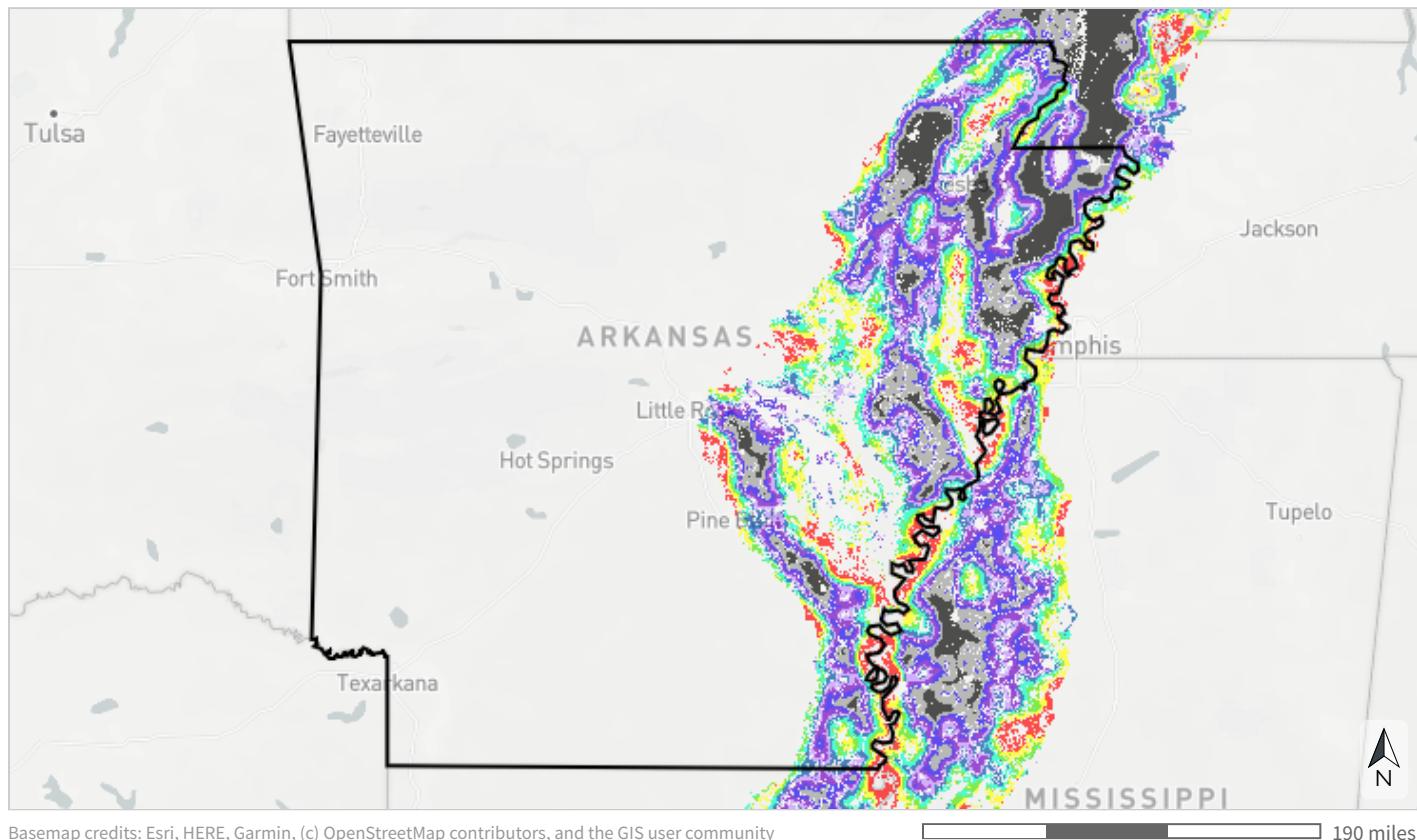

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Mississippi Alluvial Valley forest birds (reforestation)

This indicator prioritizes areas for reforestation within the Mississippi Alluvial Valley (MAV) based on benefits to three species of forest breeding birds that depend on large interior cores of bottomland hardwood habitat (Swainson's warbler, cerulean warbler, swallow-tailed kite). The model considers the core size, number of cores, and percent of local forest cover that would result from reforestation, as well as risk of conversion to agriculture based on flooding frequency. The highest scores represent drier areas where reforestation would create new forest patches containing interior cores at least 2,000 ha (~5,000 ac). It originates from the Lower Mississippi Valley Joint Venture's MAV forest breeding bird reforestation priorities.

### Likelihood that reforestation will contribute to forest breeding bird habitat needs

- Most likely ( $\geq 90^{\text{th}}$  percentile)
- Most likely (80 $^{\text{th}}$  to <90 $^{\text{th}}$  percentile)
- More likely (70 $^{\text{th}}$  to <80 $^{\text{th}}$  percentile)
- Less likely (60 $^{\text{th}}$  to <70 $^{\text{th}}$  percentile)
- Least likely (50 $^{\text{th}}$  to <60 $^{\text{th}}$  percentile)
- Least likely (40 $^{\text{th}}$  to <50 $^{\text{th}}$  percentile)
- Least likely (30 $^{\text{th}}$  to <40 $^{\text{th}}$  percentile)
- Least likely (20 $^{\text{th}}$  to <30 $^{\text{th}}$  percentile)
- Least likely (<10 $^{\text{th}}$  percentile)

*Table 11: Indicator values for Mississippi Alluvial Valley forest birds (reforestation) in this area. A good condition threshold is not yet defined for this indicator.*

<b>Indicator Values: Likelihood that reforestation will contribute to forest breeding bird habitat needs</b>		<b>Acres</b>	<b>Percent of Area</b>
↑ High	Most likely ( $\geq$ 90th percentile)	399,567	1.2%
	Most likely (80th to <90th percentile)	521,467	1.5%
	More likely (70th to <80th percentile)	540,178	1.6%
	Less likely (60th to <70th percentile)	632,993	1.9%
	Least likely (50th to <60th percentile)	643,272	1.9%
	Least likely (40th to <50th percentile)	673,943	2.0%
	Least likely (30th to <40th percentile)	708,484	2.1%
	Least likely (20th to <30th percentile)	719,375	2.1%
	Least likely (10th to <20th percentile)	919,742	2.7%
	Least likely (<10th percentile)	698,932	2.1%
<i>Area not evaluated for this indicator</i>		27,588,808	81.0%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

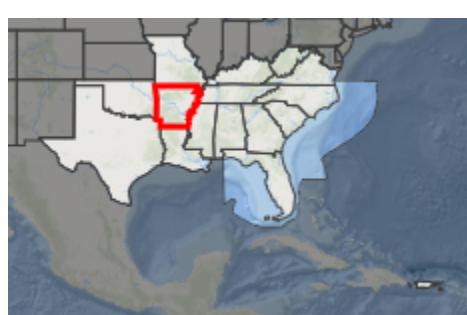

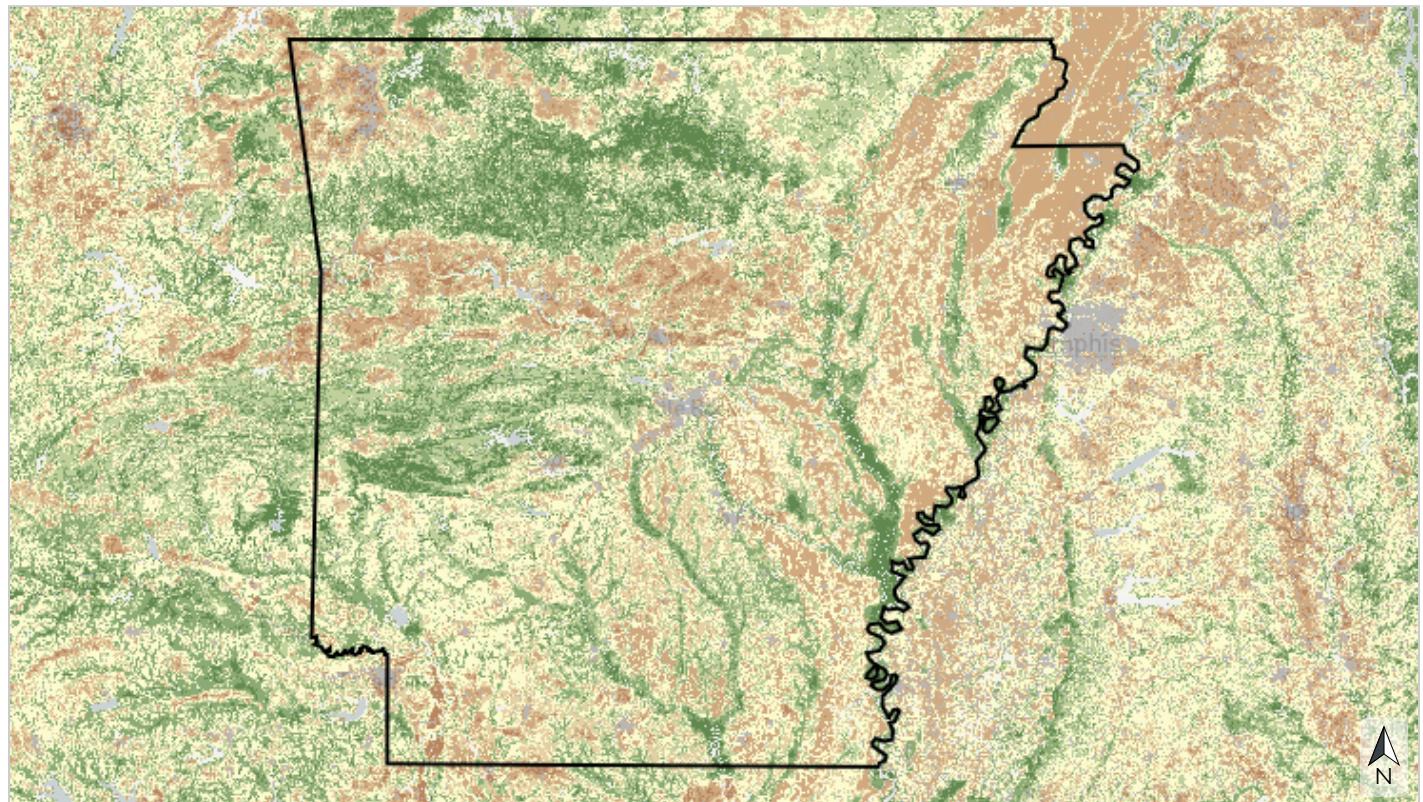

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Resilient terrestrial sites

This indicator depicts an area's capacity to maintain species diversity and ecosystem function in the face of climate change. It measures two factors that influence resilience. The first, landscape diversity, reflects the number of microhabitats and climatic gradients created by topography, elevation, and hydrology. The second, local connectedness, reflects the degree of habitat fragmentation and strength of barriers to species movement. Highly resilient sites contain many different habitat niches that support biodiversity, and allow species to move freely through the landscape to find suitable microclimates as the climate changes. This indicator originates from The Nature Conservancy's Resilient Land data.

- Most resilient
- More resilient
- Slightly more resilient
- Average/median resilience
- Slightly less resilient
- Less resilient
- Least resilient
- Developed

*Table 12: Indicator values for resilient terrestrial sites in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Most resilient	1,900,201	5.6%
	More resilient	5,820,514	17.1%
	Slightly more resilient	6,151,081	18.1%
	Average/median resilience	8,535,528	25.1%
	Slightly less resilient	4,710,011	13.8%
	Less resilient	4,882,238	14.3%
	Least resilient	316,558	0.9%
	Developed	845,247	2.5%
↓ Low	<i>Area not evaluated for this indicator</i>	885,382	2.6%
	<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

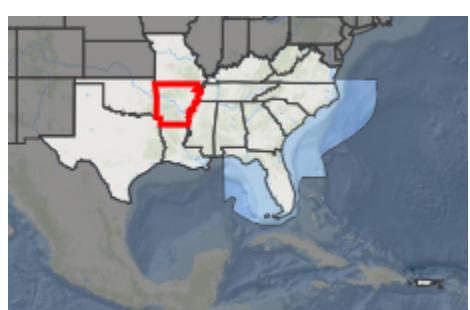

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## Urban park size

This cultural resource indicator measures the size of parks larger than 5 acres in the urban environment. Protected natural areas in urban environments provide urban residents a nearby place to connect with nature, and offer refugia for some species. This indicator complements the equitable access to potential parks indicator by capturing the value of existing parks. It originates from the U.S. Geological Survey's Protected Areas Database and 2019 National Land Cover Database percent developed impervious layer.

- >75 acre urban park
- >50-75 acre urban park
- >30-50 acre urban park
- >10-30 acre urban park
- 5-10 acre urban park

*Table 13: Indicator values for urban park size in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	>75 acre urban park	34,232	0.1%
	>50-75 acre urban park	1,423	<0.1%
	>30-50 acre urban park	1,735	<0.1%
	>10-30 acre urban park	2,828	<0.1%
↓ Low	5-10 acre urban park	885	<0.1%
	<i>Area not evaluated for this indicator</i>	34,005,657	99.9%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

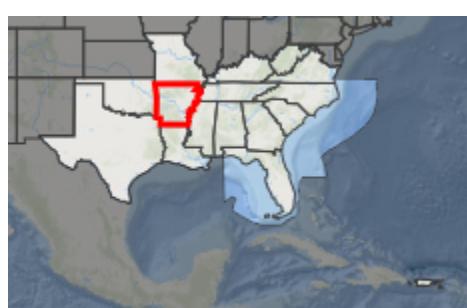

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## West Coastal Plain & Ouachitas forested wetland birds

This indicator is an index of habitat suitability for five forested wetland bird species (Acadian flycatcher, Kentucky warbler, yellow-throated warbler, prothonotary warbler, red-shouldered hawk) within bottomland hardwood forests and riparian areas in the West Gulf Coastal Plain and Ouachitas Bird Conservation Region. It uses metrics like patch size, dispersal distance, distance to water, and more to assess the potential for habitat to support sustainable populations of these birds. This indicator originates from the Lower Mississippi Valley Joint Venture's forested wetland decision support model for the West Gulf Coastal Plain and Ouachitas region.

- High habitat suitability for forested wetland bird umbrella species (Acadian flycatcher, Kentucky warbler, yellow-throated warbler, prothonotary warbler, red-shouldered hawk) (score >80)
- Medium-high habitat suitability (score >60-80)
- Medium habitat suitability (score >40-60)
- Medium-low habitat suitability (score >20-40)
- Low habitat suitability for forested wetland bird umbrella species (score 0-20)

*Table 14: Indicator values for West Coastal Plain & Ouachitas forested wetland birds in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	High habitat suitability for forested wetland bird umbrella species (Acadian flycatcher, Kentucky warbler, yellow-throated warbler, prothonotary warbler, red-shouldered hawk) (score >80)	434,926	1.3%
	Medium-high habitat suitability (score >60-80)	185,587	0.5%
	Medium habitat suitability (score >40-60)	170,302	0.5%
	Medium-low habitat suitability (score >20-40)	222,283	0.7%
↓ Low	Low habitat suitability for forested wetland bird umbrella species (score 0-20)	218,442	0.6%
	<i>Area not evaluated for this indicator</i>	32,815,220	96.4%
	<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

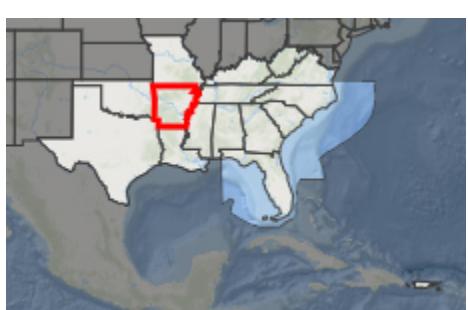

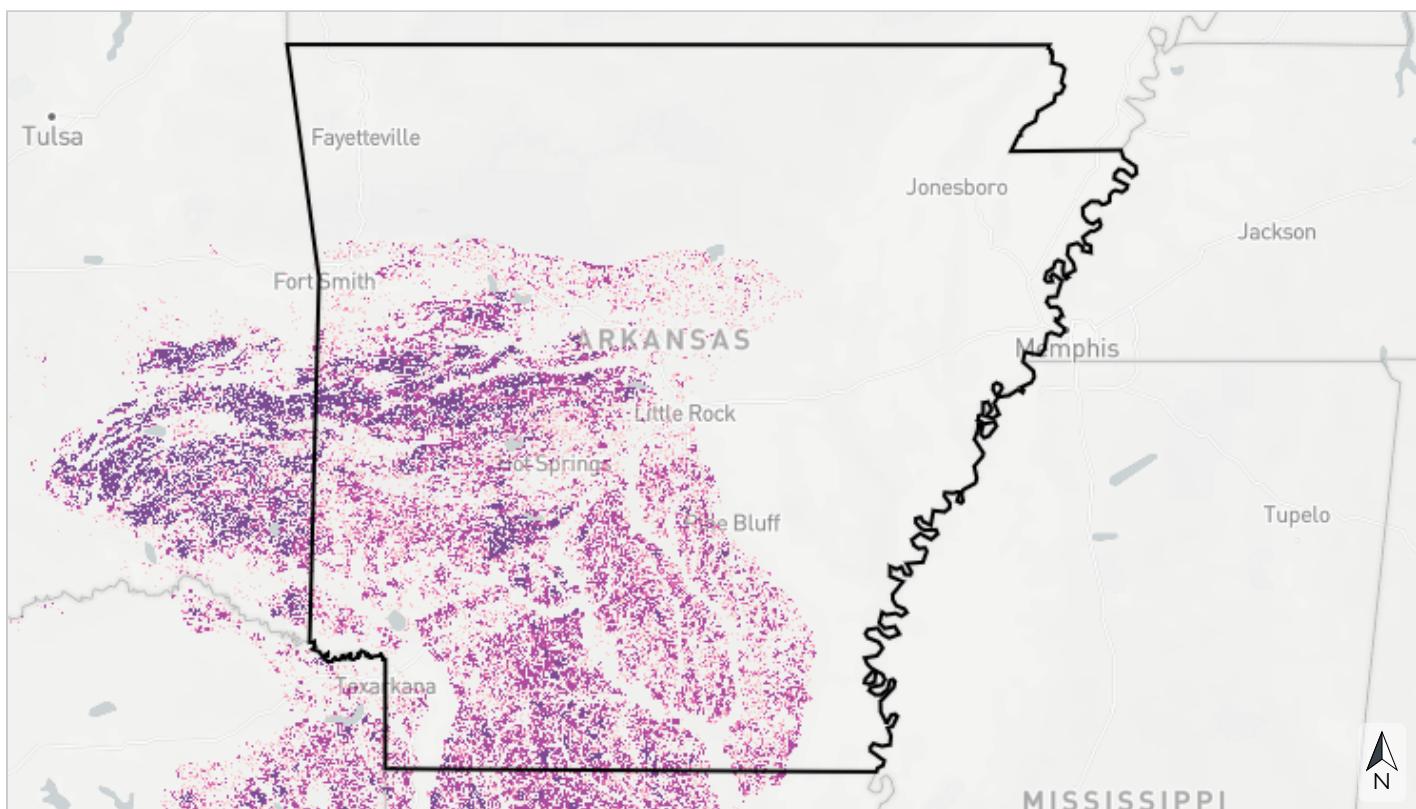

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Terrestrial

## West Coastal Plain & Ouachitas open pine birds

This indicator identifies areas with existing pine trees that, if managed for open condition, could support a population of three umbrella bird species (brown-headed nuthatch, Bachman's sparrow, red-cockaded woodpecker). It evaluates potential habitat based on each species' habitat needs and population dynamics, prioritizing opportunities to restore and manage habitat to benefit open pine birds. Final scores reflect both the selectiveness of the species and whether an area meets the habitat requirements through one large patch, or clusters of smaller patches in sufficiently close proximity for breeding pairs to disperse. This indicator updates the Lower Mississippi Valley Joint Venture's open pine decision support model for the West Gulf Coastal Plain and Ouachitas region.

- Pine patch large enough to support a population of all 3 umbrella bird species (brown-headed nuthatch, Bachman's sparrow, red-cockaded woodpecker) if managed in open condition
- Pine patch large enough to support a population of 2 umbrella bird species if managed in open condition
- Pine patch large enough to support a population of 1 umbrella bird species if managed in open condition
- Pine patch part of a cluster of nearby patches able to support a population of all 3 umbrella bird species if managed in open condition
- Pine patch part of a cluster of nearby patches able to support a population of 2 umbrella bird species if managed in open condition
- Pine patch part of a cluster of nearby patches able to support a population of 1 umbrella bird species if managed in open condition
- Pine patch too small and isolated to support a population of any umbrella bird species or not an upland pine patch

*Table 15: Indicator values for West Coastal Plain & Ouachitas open pine birds in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	Pine patch large enough to support a population of all 3 umbrella bird species (brown-headed nuthatch, Bachman's sparrow, red-cockaded woodpecker) if managed in open condition	626,654	1.8%
	Pine patch large enough to support a population of 2 umbrella bird species if managed in open condition	2,238,904	6.6%
	Pine patch large enough to support a population of 1 umbrella bird species if managed in open condition	747,937	2.2%
	Pine patch part of a cluster of nearby patches able to support a population of all 3 umbrella bird species if managed in open condition	491,017	1.4%
	Pine patch part of a cluster of nearby patches able to support a population of 2 umbrella bird species if managed in open condition	1,140,101	3.3%
	Pine patch part of a cluster of nearby patches able to support a population of 1 umbrella bird species if managed in open condition	9,280	<0.1%
↓ Low	Pine patch too small and isolated to support a population of any umbrella bird species or not an upland pine patch	10,707,811	31.5%
	<i>Area not evaluated for this indicator</i>	18,085,056	53.1%
	<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

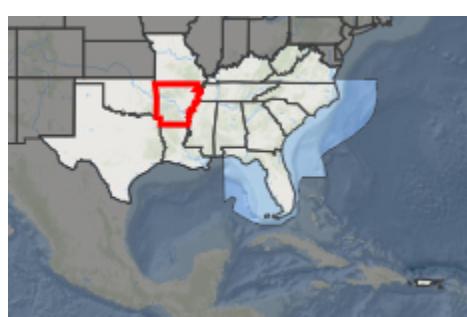

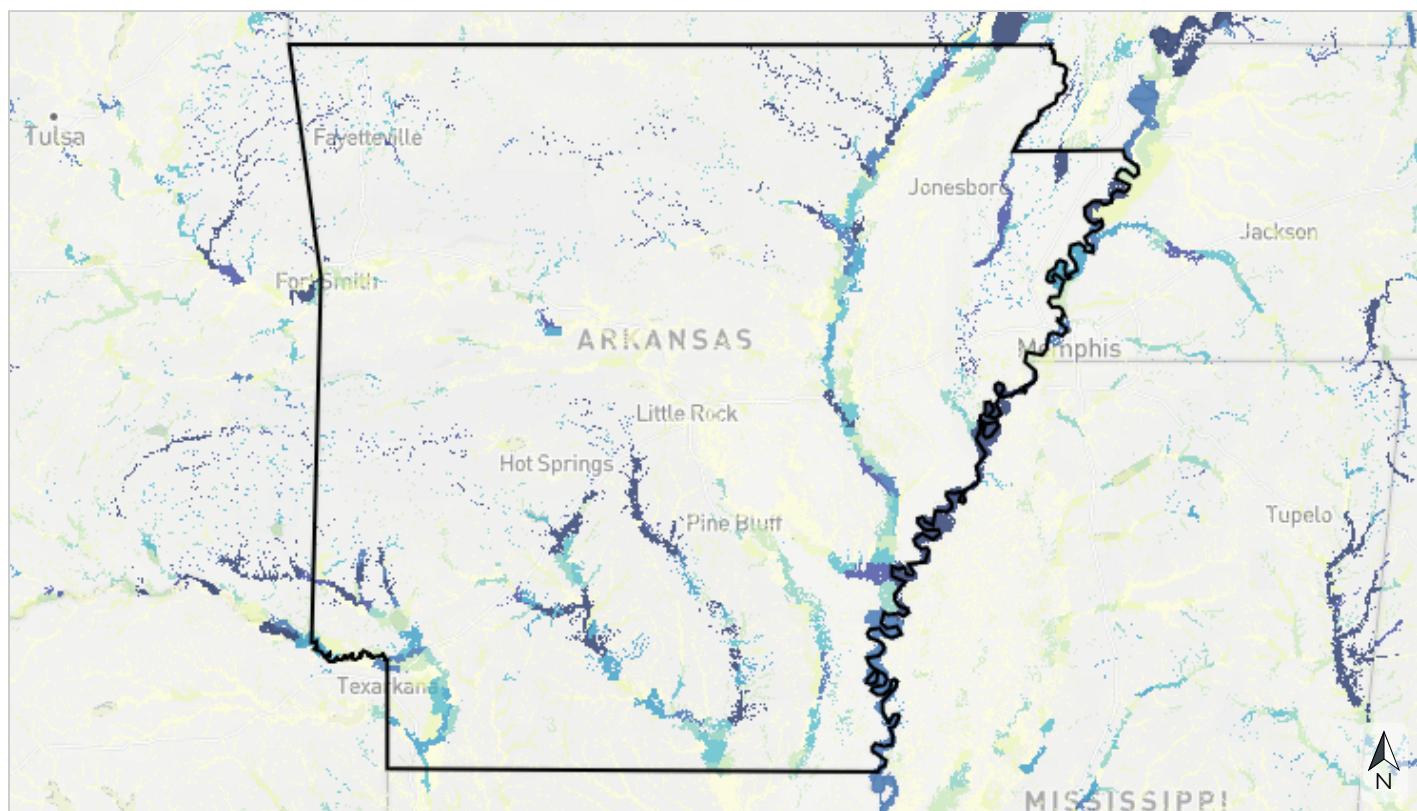

To learn more and explore the GIS data, [view this indicator in the SECAS Atlas](#).

Freshwater

## Imperiled aquatic species

This indicator measures the number of aquatic animal Species of Greatest Conservation Need (SGCN) observed within each 12-digit HUC subwatershed, including fish, mussels, snails, crayfish, and amphibians. SGCN are identified in State Wildlife Action Plans as most in need of conservation action. This indicator captures patterns of rare and endemic species diversity not well-represented by other freshwater aquatic indicators. It originates from state Natural Heritage Program data collected by the Southeast Aquatic Resources Partnership and applies to the Environmental Protection Agency's estimated floodplain, which spatially defines areas estimated to be inundated by a 100-year flood, also known as the 1% annual chance flood.

- 8+ aquatic Species of Greatest Conservation Need (SGCN) observed
- 7 aquatic SGCN observed
- 6 aquatic SGCN observed
- 5 aquatic SGCN observed
- 4 aquatic SGCN observed
- 3 aquatic SGCN observed
- 2 aquatic SGCN observed
- 1 aquatic SGCN observed
- No aquatic SGCN observed

*Table 16: Indicator values for imperiled aquatic species in this area. A good condition threshold is not yet defined for this indicator.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	8+ aquatic Species of Greatest Conservation Need (SGCN) observed	676,862	2.0%
	7 aquatic SGCN observed	203,056	0.6%
	6 aquatic SGCN observed	310,085	0.9%
	5 aquatic SGCN observed	407,997	1.2%
	4 aquatic SGCN observed	457,501	1.3%
	3 aquatic SGCN observed	485,834	1.4%
	2 aquatic SGCN observed	536,934	1.6%
	1 aquatic SGCN observed	902,491	2.7%
	No aquatic SGCN observed	2,788,649	8.2%
	<i>Area not evaluated for this indicator</i>	27,277,352	80.1%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

Freshwater

## Natural landcover in floodplains

This indicator measures the amount of natural landcover in the estimated floodplain of rivers and streams within each catchment. It assesses the stream channel and its surrounding riparian buffer, measuring the percent of unaltered habitat like forests, wetlands, or open water (rather than agriculture or development). Intact vegetated buffers within the floodplain of rivers and streams provide aquatic habitat, improve water quality, reduce erosion and flooding, recharge groundwater, and more. This indicator originates from the 2019 National Land Cover Database and applies to the Environmental Protection Agency's estimated floodplain, which spatially defines areas estimated to be inundated by a 100-year flood, also known as the 1% annual chance flood.

>90% natural habitat within the estimated floodplain, by catchment
>80-90%
>70-80%
>60-70%
≤60% natural habitat within the estimated floodplain, by catchment

*Table 17: Indicator values for natural landcover in floodplains in this area. Good condition thresholds reflect the range of indicator values that occur in healthy, functioning ecosystems.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>
↑ High	>90% natural habitat within the estimated floodplain, by catchment	2,952,663	8.7%
	>80-90%	594,956	1.7%
	>70-80%	405,466	1.2%
↓ Low	>60-70%	370,924	1.1%
	≤60% natural habitat within the estimated floodplain, by catchment	2,445,399	7.2%
<i>Area not evaluated for this indicator</i>		27,277,352	80.1%
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

Freshwater

## Network complexity

This indicator depicts the number of different stream size classes in a river network not separated by dams or waterfalls. River networks with a variety of connected stream classes help retain aquatic biodiversity in a changing climate by allowing species to access climate refugia and move between habitats. This indicator originates from the Southeast Aquatic Resources Partnership and applies to the Environmental Protection Agency's estimated floodplain, which spatially defines areas estimated to be inundated by a 100-year flood, also known as the 1% annual chance flood.

Freshwater

## Permeable surface

This indicator measures the average percent of non-impervious cover within each catchment. High levels of impervious surface degrade water quality and alter freshwater flow, impacting both aquatic species communities and ecosystem services for people, like the availability of clean drinking water. This indicator originates from the 2019 National Land Cover Database percent developed impervious layer.

- >95% of catchment permeable (likely high water quality and supporting most sensitive aquatic species)
- >90-95% of catchment permeable (likely declining water quality and supporting most aquatic species)
- >70-90% of catchment permeable (likely degraded water quality and not supporting many aquatic species)
- ≤70% of catchment permeable (likely degraded instream flow, water quality, and aquatic species communities)

*Table 19: Indicator values for permeable surface in this area. Good condition thresholds reflect the range of indicator values that occur in healthy, functioning ecosystems.*

	<b>Indicator Values</b>	<b>Acres</b>	<b>Percent of Area</b>	
↑ High	>95% of catchment permeable (likely high water quality and supporting most sensitive aquatic species)	32,189,228	94.5%	↑ In good condition
	>90-95% of catchment permeable (likely declining water quality and supporting most aquatic species)	886,806	2.6%	
↓ Low	>70-90% of catchment permeable (likely degraded water quality and not supporting many aquatic species)	729,861	2.1%	↓ Not in good condition
	≤70% of catchment permeable (likely degraded instream flow, water quality, and aquatic species communities)	240,864	0.7%	
<b>Total area</b>		<b>34,046,760</b>	<b>100%</b>

# Threats

## Sea-level rise

Sea-level rise unlikely to be a threat (inland counties).

## Urban growth

The FUTURES urban growth model predicts the likelihood that an area will urbanize at every decade from 2020 to 2100. Developed areas from the 2019 National Landcover Database serve as the baseline for current urban areas. The model simulates landscape change based on trends in population growth, local development suitability factors, and an urban patch-growing algorithm. It considers environmental drivers like distance to floodplain, slope, and available infrastructure, and even socio-economic status. The probability of urbanization for each area reflects how many times it urbanized out of 50 model runs.

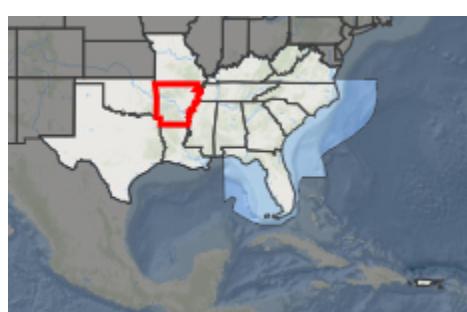

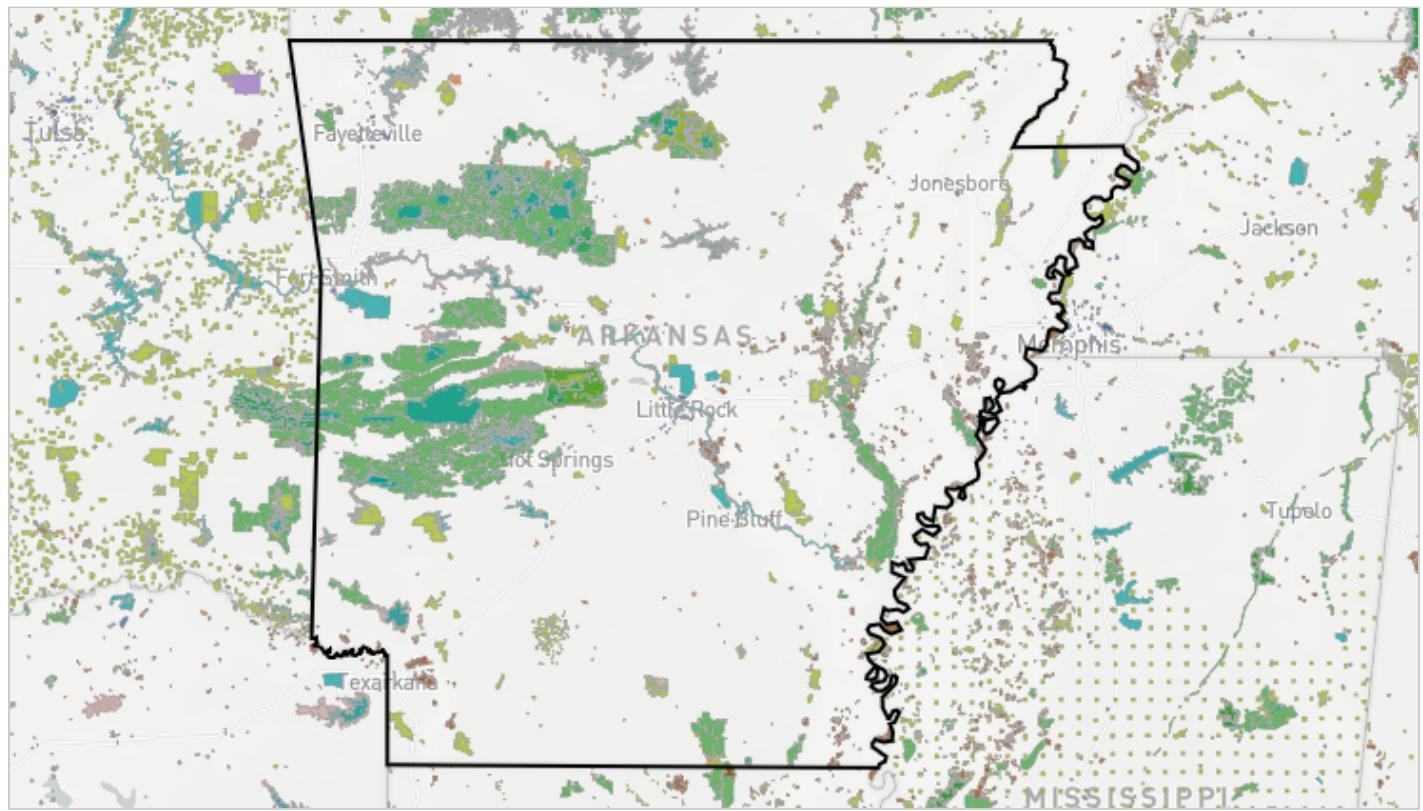

6.2% of this area is already urban in 2019, and an additional 6.1% has at least a moderate probability of urbanizing by 2060.

*Table 20: Extent of projected urbanization by decade in this area. Values from the FUTURES urban growth model. Data provided by the [Center for Geospatial Analytics](#), NC State University. 2060 corresponds to the [SECAS goal](#): a 10% or greater improvement in the health, function, and connectivity of Southeastern ecosystems by 2060.*

<b>Decade</b>	<b>Acres</b>	<b>Percent of Area</b>
Urban in 2019	2,121,551	6.2%
2020 projected extent	2,133,903	6.3%
2030 projected extent	2,162,142	6.4%
2040 projected extent	2,185,558	6.4%
2050 projected extent	2,205,009	6.5%
2060 projected extent	2,222,672	6.5%
2070 projected extent	2,237,699	6.6%
2080 projected extent	2,249,879	6.6%
2090 projected extent	2,257,381	6.6%
2100 projected extent	2,261,424	6.6%
<i>Not projected to urbanize by 2100</i>	29,427,426	86.4%
<b>Total area</b>	<b>34,046,760</b>	<b>100%</b>

# Ownership and Partners

## Conserved lands ownership

Federal	Joint
State/province	Private non-profit conserved lands
Territorial	Private conservation land
Regional	Tribal
Local	Designation
	Ownership unknown

*Table 21: Extent of ownership class in this area. Protected areas are derived from the [Protected Areas Database of the United States](#) (PAD-US v3.0). Note: areas are based on the polygon boundary of this area compared to protected area polygons, rather than pixel-level analyses used elsewhere in this report.*

<b>Ownership</b>	<b>Acres</b>	<b>Percent of Area</b>
Federal	3,073,212	9.0%
State/province	1,079,682	3.2%
Regional	33	<0.1%
Local	21,530	<0.1%
Private non-profit conserved lands	23,700	<0.1%
Private conservation land	335,214	1.0%
Designation	918,764	2.7%
Ownership unknown	423,357	1.2%
<i>Not conserved</i>	28,171,308	82.7%
<b>Total area</b>	<b>34,046,800</b>	<b>100%</b>

## Land protection status

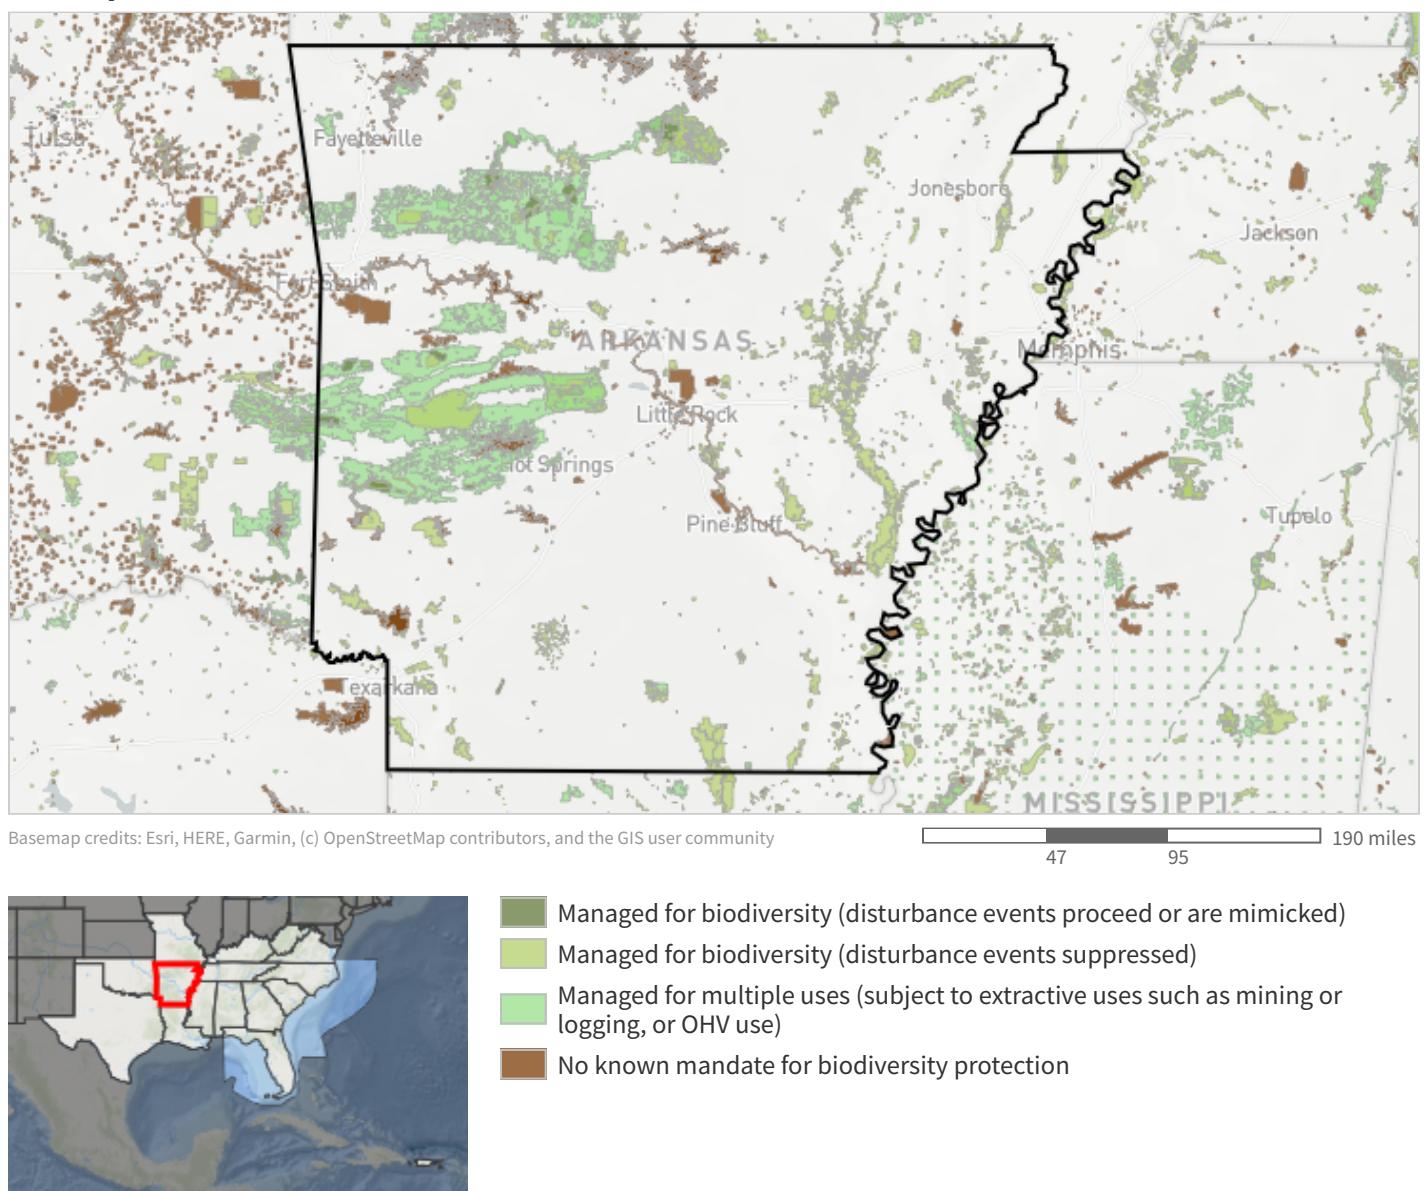

Table 22: Extent of land protection status in this area. Protected areas are derived from the [Protected Areas Database of the United States](#) (PAD-US v3.0). Note: areas are based on the polygon boundary of this area compared to protected area polygons, rather than pixel-level analyses used elsewhere in this report.

<b>Land Protection Status</b>	<b>Acres</b>	<b>Percent of Area</b>
Managed for biodiversity (disturbance events proceed or are mimicked)	172,163	0.5%
Managed for biodiversity (disturbance events suppressed)	1,981,482	5.8%
Managed for multiple uses (subject to extractive uses such as mining or logging, or OHV use)	2,827,289	8.3%
No known mandate for biodiversity protection	894,558	2.6%
<i>Not conserved</i>	28,171,308	82.7%
<b>Total area</b>	<b>34,046,800</b>	<b>100%</b>

## Protected Areas

- Ouachita National Forest (USDA FOREST SERVICE; 1,430,591 acres)
- Ozark-St. Francis National Forest (USDA FOREST SERVICE; 1,161,020 acres)
- Winona Wildlife Management Area (State Fish and Wildlife; 281,188 acres)
- Sylamore Wildlife Management Area (State Fish and Wildlife; 253,616 acres)
- DALE BUMPERS WHITE RIVER NATIONAL WILDLIFE REFUGE (Fee; 156,769 acres)
- Ouachita (144,821 acres)
- BUFF (NPS; 89,039 acres)
- CACHE RIVER NATIONAL WILDLIFE REFUGE (Fee; 73,537 acres)
- FELSENTHAL NATIONAL WILDLIFE REFUGE (Fee; 69,170 acres)
- BULL SHOALS (Unknown; 67,252 acres)
- NG Fort Chaffee MTC (65,121 acres)
- DARDANELLE (Unknown; 57,103 acres)
- NORFORK (Unknown; 49,604 acres)
- GREERS FERRY (Unknown; 41,234 acres)
- Lake Ouachita (38,297 acres)
- BEAVER (Unknown; 38,135 acres)
- MILLWOOD (Unknown; 37,670 acres)

- Bull Shoals Lake (35,712 acres)
- Buffalo National River Wilderness (34,564 acres)
- NG Camp Joseph T Robinson (33,124 acres)
- Bayou Meto (State Fish and Wildlife; 32,023 acres)
- Lake Greeson Wildlife Management Area (State Department of Natural Resources; 31,625 acres)
- Greers Ferry Lake (31,067 acres)
- Beaver Lake (28,875 acres)
- Howard County Wildlife Management Area (State Department of Natural Resources; 27,470 acres)
- ... and 1,169 more protected areas ...
